ENERGYWISE®

Guaranteed Energy Saving Building Solutions

*EnergyWise will perform an Energy Analysis at a half the normal price on the home you will build and will guarantee you a savings of 50-70% on your heating and cooling costs versus a conventional stick-built home. Just purchase the Energy Analysis from EnergyWise to get started and Reward Wall Systems will reimburse you for the out of pocket cost of the analysis upon delivery and payment of Reward Wall Systems forms to your home construction site. EnergyWise will issue and manage the energy guarantee. See EnergyWiseStructure.com for details and more information.

Reward ICF Defined

Two pieces of foam are connected by strong plastic ties to make a 16" tall form. The forms are stacked and then filled with concrete. The forms remain in place and provide several inches of insulation.

Versatile

Reward's extensive product line allows a choice of concrete wall thickness and the flexibility to have the home design you desire.

Straightforward

1-1/4" furring strips, recessed 1/2" and 6" on center allow for easy attachment of drywall and exterior finishes. Exterior foam provides easy placement of electrical wiring and plumbing.

Solid

Achieving a straight and square insulated steel-reinforced structural wall is easy with Reward's patented designs.

Strong

8 full length ties placed 6" on center plus several inches of foam on each side provide unmatched strength during concrete pours.

Easy

Reversible forms with no top or bottom, no right or wrong side and no left or right corner make stacking easy with Reward ICFs.

Fast

It's a snap to place horizontal rebar. With the loose fit 2-deep design, there's no need to tie the rebar.

Benefits of Reward ICFs

Strength and Safety

Proven to withstand fire for up to four hours, winds up to 200 mph and seismic activity, Reward ICF walls protect your family and your belongings from the elements, no matter the magnitude.

Healthy Living

A Reward built home is a safe haven from irritants that can aggravate your allergies and your health. Mold, mildew and dust particles are blocked, creating a clean environment for your family to enjoy. The thick concrete walls also block out exterior noises to create a peaceful retreat.

Design Flexibility

Reward ICFs carry the versatility to fit any home plan you can imagine. They allow the flexibility to achieve curved walls, archways and an array of interior and exterior finishes, all while incorporating the strength of concrete.

Environmental Impact

Reduced energy usage is just the beginning of ICFs' benefits. By reducing the amount of wood used in construction, forests are protected and allowed to thrive. Sophisticated design allows for minimal waste in the field, and what remains of the form can be recycled.
